Immediate Tracking Results

The Belt Positioner[™] is the simple, reliable solution for problem belts that consistently mistrack to one side of the conveyor. The Belt Positioner works on the return side belt using simple angled rollers mounted in a fixed position to quickly and continuously funnel the belt into the correct path. This is the "quick fix" solution for belt tracking problems caused by conveyor misalignment mishaps, ground shifts, or on temporary systems.

Features and Benefits

- No belt edge damage. The idler rollers on the Belt Positioner make smooth contact with the return side belt's bottom cover and not on the belt's edges.
- **Easy installation and setup.** Simply preset the unit for the conveyor structure width, position the unit on the belt and bolt or weld in place. Adjust the rollers to the belt and watch the results. It's simple and you can see the results immediately.
- Economical. Durability and budget-conscous pricing make the Belt Positioner very versatile.
- Long service life. The Belt Positioner's innovative design does not rely on a pivoting mechanism to move and steer a wandering belt. The rollers are sealed for life. Simply inspect the idler rollers occasionally for wear.
- Works with mechanically fastened and vulcanized belts.
